Summary

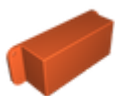

just a fun little design - not a competition drone

Tags: [frame](#) [drone](#)

A little bigger take on a 5" FPV drone - with a cover to protect the electronics without adding too much bulk. Battery holder underneath. Just needs 4 standoffs and some bolts to put it all together. Fun drone to fly, just not competitive. Good protection of the important bits so long as you ziptie strain reliefs into the wiring. Design that is uploaded has a better cover.
