Summary

This is a Motor Fanmount for a RC-Car. It is made for an 40mm Fan. I don't recommend to use PLA!

Tags: [rc](#) [motor](#) [mount](#) [fan](#) [fanmout](#)

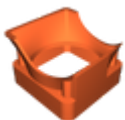

PETG is recommended.

You need to enable supports on build plate only!

I have added a version with a brim, if you have problems with printing.

The fan is mounted with four M3 screws. Be sure about the right length. Too long scewes will damage the print.
