Wanted a gravity feed water dish for my Chihuahua that didn't use 3 liters of water so the solution was to make one. This will work for small breed dogs and cats. No supports required. Recommend printing in PETG but I've found that ABS with vapor smoothing and aerating for several days after can be very nice and make a beautiful finish as well. Photo is of test print using transparent ABS before smoothing. Uses a 591 ml Gatorade bottle. Remove the label so you can always see the level and be sure to clean it thoroughly at every refill for your pet's health. Replace the bottle regularly as well to prevent bacteria buildup. Put the expended bottle in recycle please.
