updated 25. 3. 2022 | published 25. 3. 2022

### Summary

Bracket to mount a PET bottle to a surface. Intention is to use a bottle as leg for a table

---

[Household](#) > [Living Room](#)

---

Did you want to build a small table? Get some bottles (the more rigid one), a nice wooden board, some countersunk screws and this thingy.

You can fill the the bottles with stones, marbles, sand .. whatever looks nice

### Print Instructions

- PETg (recomended due to good mix of rigidity and flexibility)
- 10% infill
- at least 3 perimeters
- print at least 3 of this to get a stable table ;-)

### Assembly

- prepare your table surface as you like
- mount bracket with screws
- optionaly fill the bottles with nice looking stuff - do not make them to heavy!
- screw bottles into the bracket

## additional notes

I'm interested in your feedback to improve my stuff! So give me likes, post makes, comment and rate the print to show others and me how well it goes.

If you post a make, let me know which filament you use.

If you want to support me by donating a coffee go to <https://ko-fi.com/antimaterie> I would really happy about it. The money will be invested in all stuff regarding 3d printing to give more and better quality models.

In general my Prints are not for commercial use, but if you are a print farm owner and want to sell some of my stuff, please contact me.

Hope you enjoy my models.
