Bottle opener for your bicycle!

The opener consists of two parts for easier installation. I highly recommend to check out the Slicer file because I implemented a modifier for a 100% infill at the weak spot of the opener.

Secure with **two m3 bolts and nuts**.

For use you have to put an 1 cent coin into the slot. This makes the opener very durable. There is also a **5x10mm pocket to insert little magnets** while printing the upper piece so the bottle caps stay attached to the

opener. This is very useful when you are opening a bottle while driving and do not have any trash bin in sight.
