## Summary

It's the Simple Steam Deck Dock with Active Cooling, but now with the ability to adjust the angle.

This is a Remix of my Simple [Steam Deck Dock with Active Cooling](#) (specially the steamdeckdock-5-fans-larger-wire-channel.stl), but now with the ability to adjust the angle. The holes in the locking mechanism between the top and bottom pieces are M5 in size, and i just used a nut and screw in the pictures and it works pretty well. I've also removed the back bay area to allow it to lay flatter as you can see in the pictures.

The dock can fit 5 40x40x20 fans or 5 40x40x10 fans. The fit is tight and may require sanding, but I didn't want to have to glue anything in. The hidden wire channel is 14.91mm x 14.91mm, so there should be plenty of room.

Feel free to remix this or laugh and make a better one from scratch. I'm Q2 on my SteamDeck, so if you have a SteamDeck and you would like changes feel free to message me and I'll make edits.
