Summary

Mega remix to make the giant nozzle model into a filament cutter and container to catch the filament scraps

[3D Printers](#) > [Accessories](#)

Tags: [filament](#) [cutter](#) [nozzle](#) [accessory](#) [accessories](#)
[filamentcutter](#)

Triple remix to make the fabulous filament cutter model into a giant printer nozzle shape.

The lid portion is printed in 2 sections to get the optimum surface finish, especially when using silk-like filaments.

The lid can be easily slid off to empty the filament scraps.

To hang up from your 3D printer cabinet print the spring if your choice from 3D Printy's "Spring Latch".

3mf file included with optimum print orientations for each part

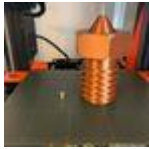

Needs 2x M3x25mm screws & 2x springs from a ballpoint pen as per Pomi's original design.

This remix is based on
