### Summary

Mount for Logitech C920 Camera, mounted to the corner rail with an optional lower mount to wrap up excess USB Cable

[3D Printers](#) > [3D Printers - Upgrades](#)

Tags: [logitechc920](#) [prusabox](#)

This print is designed to allow mounting a Logitech C920 to the PrusaBox rail, without having to take off the mount that comes supplied with the camera. The original mount just slides into a square housing to hold the camera. The housing can swivel from side to side. Note if the bottom of the vertical mount rests on top of the lower wiring mount it reduces or eliminates the vibration.

There is also an optional mount that can be used to tie up excess cable.

The parts need to be rotated as shown in the last picture for printing
