NCASE M1 sadly has been discontinued. Wanting to continue using the case, but making it more current with a usb-c port, I decided to remix [RCodispoti's](#) V5 blanking mod to instead have USB-A and USB-C ports.

Uses the 2 original mounting screws and the 2 original power button screws. Tap with M3 for easier assembly.

Requires a Type E-M to Type C-F cable such as [this](#).

Printed face down - no supports.
