July 11,2019

I am adding a fix with better supports and cleaning up and void on the inside which prevented supports from coming out.

I decided I wanted a better looking Fire Cube stand than, what was on the market. I love this design and with both the builtin or blank port for the remote IR it makes a very tight design as much as its appealing.

Print Settings

Printer Brand:

Creality

Printer:

Ender 3

Rafts:

Yes

Supports:

Yes

Resolution:

0.08 or 0.16

Infill:

10%

Filament: Hatchbox PLA White

Notes:

I have my heat at 210 for the nozzle and 60 for the bed. The fan is on and retraction is on 5mm distance, and speed is at 40.

I always prefer a Raft and at 5mm margin, there is very little waste.
