A simple way to store your Nozzles in the **Ultimate Prusa casing**. In the style of the colorful upgrade for this casing, I created a simple drawer to store your Nozzles in.

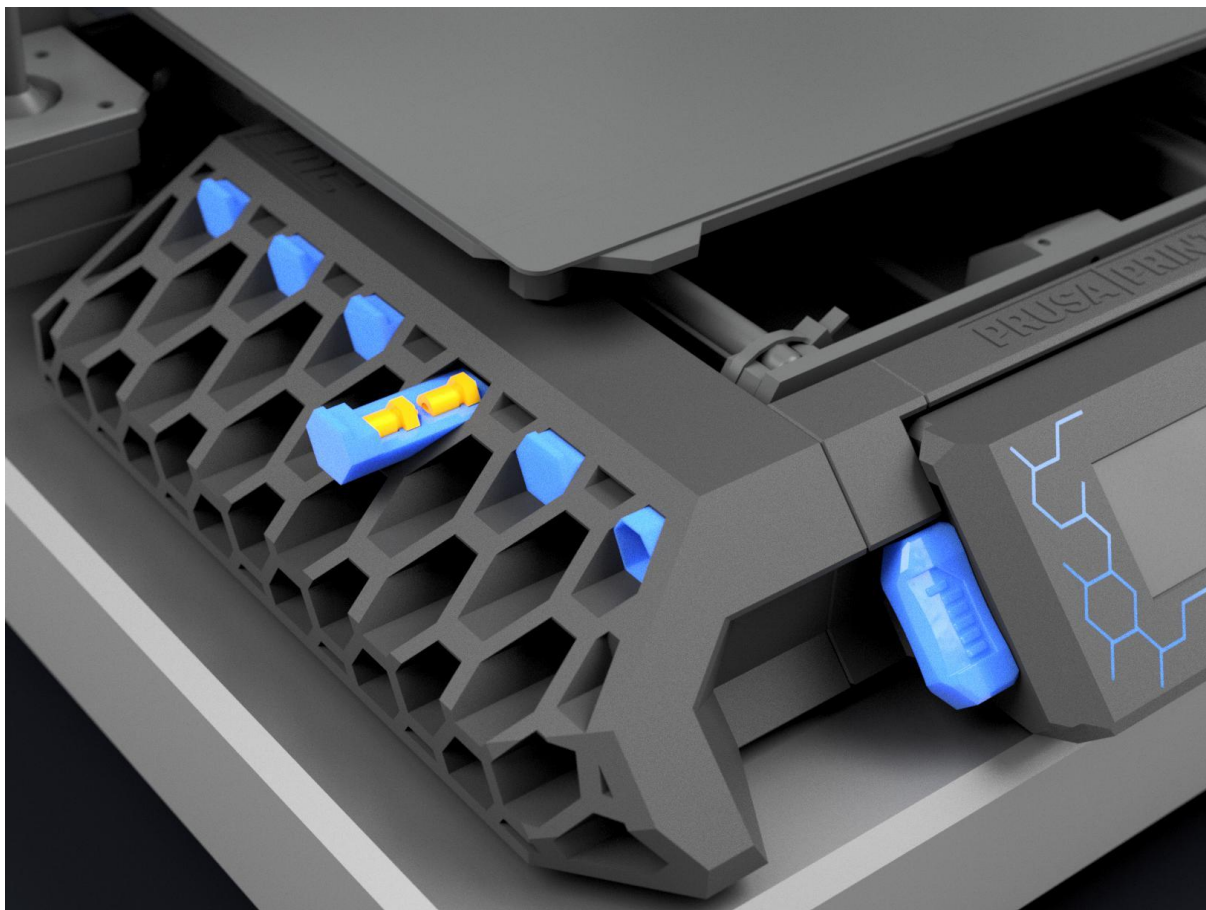

The drawer is made for the top row of holes.

There are two different lengths because one of the holes in the top row is less deep.

This means you can print one for each side of the short version and four of the long version.

In total you can store **up to 18 nozzles**.

Print the parts as already aligned.

If you like check out **my other designs too!**

Note: Since the question came up recently, the license states that you may not use this model commercially. For me it's ok if you show the photos or the model to your audience, even if you make money with it as long as you name me as the creator and link to this page. You are not allowed to sell the files or the printed model itself.
