### Summary

I've recently finished my screen accurate Graflex lightsaber project.

I've recently finished my screen accurate Graflex lightsaber project. This is one of the two display stands that I designed for the lightsaber. It has a traditional horizontal build with a structure inspired by the grips on the side of the Graflex. It fits most saber hilts.

Originally both display stands were exclusive to my Graflex Lightsaber model, but now I'm sharing them for free. :)

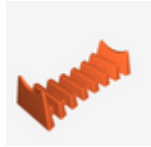

You can get my Graflex Lightsaber on Cults3D (link below).

<https://cults3d.com/en/3d-model/gadget/graflex-lightsaber>

The model is completely identical to the 1980 The Empire Strikes Back and 2015 The Force Awakens movie props. (The buttons can be assembled as seen in the ESB or in the TFA.) I've used the dimensions of the 3 cell Graflex flash handle as a reference which was the original lightsaber prop. It's made of 36 separate parts, all of them support free, optimised for FDM.

printing and they can be assembled without any glue. I've attached highly detailed printing and assembly instructions.
