The small Vello remote for my Nikon DSLR was constantly being activated in my camera bag, so I started to pull the batteries out every time I was finished using it. So every time I needed to use it again it was a hassle. This box fits perfectly in my small camera bag and keeps everything (but the cord) in one spot to include some spare batteries. The lid may need a little cleanup post print to make it slide nice.

eSun PLA+ in Orange (for high visibility), .3 LH. I printed this one with a .65 line width (.45 for bottom, .4 for top) with a .4 nozzle and it seemed to work great and really cut down on print time.
