This is for marking pipe coping to join 2 3/8 inch pipe in 90 degree angles before welding.

Simply slide the marking tool onto your 2 3/8 inch pipe, mark or scribe the line, remove the marking tool, and cut the pipe with your favorite method. Now you can join your pipe sections in a precise fit and easily weld them together without needing to make a jig or burn through hole saws.

Let me know if you want another size and I'll see what I can do.
