Summary

This is a replacement lower hinge pin that the bottom door sits on.

The lower hinge pin (that the fridge door sits on) on my Frigidaire FGHT2055VF1 came cross threaded from the factory. I needed to switch which way the fridge door was hung, and until I could get a metal replacement pin sent to me I designed this 3d printed version.

While I ultimately plan on swapping this plastic pin out with a metal replacement, in the short term it has been working great. Honestly, I wouldn't be surprised if this plastic pin lasts a long time.

I printed in PETG with 20% fill and 4 vertical walls for strength.
