[stress](#) [anxiety](#)

Simple to print, 100% print in place with no brim or support needed, just print & play

Brand new inner core that's strong and simple

Works great with most filaments including silk!

My newest twist fidget with more surprises on the way soon

Includes painted profile & STL file for convenience

The perfect little stress ball

For anyone printing with the STL file, default settings work great however please enable no-brim in your slicer & I also recommend 0% infill

Have fun!
