Summary

The small clip that holds the plastic grill to the metal frame. This was designed for a 1999 Toyota Tacoma.

This is a model of the small plastic grill clip used to secure the grill onto the front of various Toyota vehicles. Based on the description of the part it may also be used in the interior. The model isn't an exact copy of the original as it has some small features that are hard to duplicate on an FDM printer, but it got the job done for me.

Printed on it's side in PETG with a .32 layer height, but layer height should work for this model. Make sure detect thin walls is turned on and print with supports on the baseplate.
