Summary

Switch covers for guitar pedals, fits standard 10mm footswitches. Great for playing in bare feet!

These guitar pedal footswitch caps simply pop on/off your pedals. They create a bigger surface area and are much more comfortable when playing in bare feet.

There are two designs, a hexagon and circle, both with a similar striped pattern on the top.

I printed with a few colors, and this copper/black combo was awesome! It should look good with any two colors that have a lot of contrast between them though.

Make sure to orient the print so the top of the cap is on the print bed flat. No need for any support.
