updated 19. 11. 2023 | published 19. 11. 2023

Summary

A compact cable clip that can hold big (or multiple) cables and that allows you to push cables in and out.

Sometimes you need to run a cable in a clean manner and also be able to remove it (or what it's attached to) quickly and take it with you.

That is why I made this.

I printed mine in PLA and they are very strong.

The screw driver access hole allows for it to be much more compact

I made two versions, one is for flat head screws and the other is for round head screws.

Both were designed with #8 wood screws in mind.

If you plan to use flat head screws, dont overtorque, this could split the layers...

Nothing too special but certainly handy...

Enjoy! and don't forget to post your make!

And If you have a minute, check out my other models!
