Tags: [ender](#) [ender3](#) [ender3max](#)

Add a pair of drawers under the screen of your Ender 3 Max, The bottom drawer is much larger and is great for storing printer-related things like superglue, or filament clips. The top drawer is much smaller and has a section for storing nozzles. You get 5 rows, so you can keep your different diameters separate, as well as a little storage section for loose screws or whatever else you can imagine.

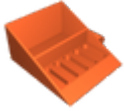

The base also includes a mounting point that slides into your V slot extrusion to help brace the base when you're pulling out the drawers.

There are two versions of the base: standard and +1cm. I use vibration dampening feet, so the extra 1cm in height allows the drawers to sit flush with the table even with the feet. If you don't use feet, print the standard height version.
