updated 2. 4. 2022 | published 2. 4. 2022

### Summary

This is a diff locker for the kyosho MA020 Mini Z chassis. It simulates the rigid axle offered by Kyosho PN MDW024

[ma020](#) [mdw024](#)

Open the differential by removing the 3 Philips head screws. Remove the 2 large and 3 small bevel gears along with the bevel gear holder. Install the differential locker between the two differential halves. I recommend doing this to both the front and rear differential for drifting.
