Summary

There are two models here. The first is my prototype which is usable straight off the print bed.

There are two models here. The first is my prototype which is usable straight off the print bed. The second (V2) has a taller heel to allow non slip rubber feet to be stuck to the underside to better grip the work piece.

On a Prusa Mk3 or a printer with a similar sized bed, you will need to turn the model so it sits diagonally on the bed to fit it on.

Print instructions

Use thick sides and 20% or more infill to ensure that the push stick is strong.
