It's a tiny parts bin! Not much to it other than it easily holds your little bits while you work on your stuff. I decided I needed one while I was disassembling and reassembling my Logitech G920. I had a few too many tiny bits to just leave laying around my work surface. A mix of plastic and metal (buttons and screws) led to the idea to set magnets in it as well to keep it all separated. I printed it in .12 but you should do what you want. Doesn't need much infill as it shouldn't be holding enough weight to justify it. I used 20% just because that's my default. Made in PLA. I used little 10mm magnets from amazon (available here: https://www.amazon.com/gp/product/B097T836B7/ref=ppx_yo_dt_b_search_asin_title?ie=UTF8&th=1) Please take this and remix it to your specific application! I'd love to see your ideas!
