I made this phone stand that easily attaches to the Corsair K65 / K70 RGB (Mk 1) keyboard. It may also fit other corsair keyboards with the same tooling. I provided different sizes as .stl in the downloads, but you can also do your own adjustments with the .f3d source file in Fusion360.

The .stl files have 2 measurements that describe the size of the notch for the phone. First one is for the depth (thickness of your phone) and the second measurement is for the lip (a high lip will cover your screen). See the drawing if this explanation isn't sufficient.

This model doesn't need supports. Just lay the flat side of the clamp on the print bed.
