Print instructions

Print bottom side down, break off support tabs around inside zip tie slot and battery indicator.

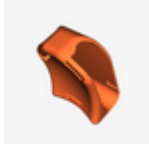

I printed at 0.3mm, 10% infill.

Uses 3 pieces of 20mm wide by 1.5mm thick velcro, and an optional ~12" zip tie.

It's a tight fit on my battery, and my print settings, so I opted not to use the zip tie in the end.

- I've added a no-ziptie version, but YMMV for battery fit, so if in doubt, use the ziptie one instead.
