### Summary

Decorative hexagonal wall tiles

Simple wall tiles I created in Blender, I wanted some hexagonal tiles for my wall, because as we all know, hexagon is the bestagon.

One tile requires only 32 grams of filament so you can print a lot of them from one spool.

I included a blank tile for you to put whatever pattern, logo or text you want on them.

I print them with 0.28 layer height, 10% grid infill, concentric top/bottom all at 60mm/s.

This is a reupload of my model from thingiverse: <https://www.thingiverse.com/thing:4620701>

Update: Added blank half tile
