Size isn't perfect I had to heat up my bit with a lighter so it might take a few shots if you want it hot-swappable with other bits, basically I scaled down the old screwdriver handle to accomodate 4mm bits, when I did a numerical conversion it was still to tiny after printed in pla so I bumped it up from there.

I basically wanted something like the original stubby handle but for my 'ifixit' clone set, as I was tired of having my tech screwdriver out in the wild, now if I lose the bit it's only the bit and a re-printable handle lol.

Literally just printed it no adhesion or supports, and its pretty small so you can do what you feel like as far as walls/support, you could go 100% as it's pretty tiny and prints in less than 20 mins on an .08 mm nozzle.
