Summary

Good old Formuling Steering Wheel Covers decompose after 30 Years.

[Hobby & Makers](#) > [Automotive](#)

My 30 Years nicely stored Formuling Steering Wheel fell apart like Dracula in the Sunlight when i touched it.

Then i consulted the Internet for an replacement Nope. All the centerpieces are torn, desintegrated and crumbled.

I got a mission.

This Print is experimental!

I succeeded the dimensions, the design and the flex to be the Hornsignal-Aktuator.

Printed in Prusa-Flex 98 without dimension correction makes it perfectly work but my solution is still imperfekt to print the design of the drivers side surface within one piece.

So i had to slice it and im still not happy with the idea to glue something flexy together.

Id would be happy someone can solve this and offer me a functional part.
