Summary

A recreation of the drone and flower from my new favorite mech anime 86.

For the drone Eintagsfliege, most support are designed in place, be careful when removing the stem on the body from the cone support. A 1.1mm drill may be needed to clean the hole in the wing before plug in the stem.

Higanbana Flower parts require some support, be aware this part can be REALLY DIFFICULT since one wrong move the petals will fell apart(it's much easier to use superglue when assembling the petals).

Optional heat treating may be tested to shape the stamen to a more correct direction.

Eintagsfliege Modeling Process:
