Summary

Some printable spacers to stop the drip tray on a Breville Bambino Plus from shifting and rattling.

The metal grate on the Breville Bambino Plus drip tray does not sit tightly on its plastic reservoir, so it rattles around while the coffee machine is running.

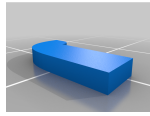

I've designed some small shims to attach to the plastic reservoir that keep the metal grate sitting firmly in place.

For my machine, 1.5 mm thick shims were perfect, but I've included the FreeCAD (Link Branch) file for you to customise if necessary.

I used a water-resistant superglue to attach the shims to the drip tray.
