updated 30. 3. 2022 | published 30. 3. 2022

Summary

Replacement for the out of production fuel tank damper. Can be printed in TPU or Nylon! Should be relatively flexible.

Kawasaki part 920751762 is no longer produced.

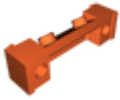

This is a near perfect replica of it and should be printed in a flexible material: Nylon, TPU, Ninjaflex, etc.

The factory part has two cylindrical recessions on the bottom, most likely for material savings for mass manufacturing, but they're not necessary. I've included a version that doesn't have them (which is probably easier and faster to print).
