Prints best at 0.2mm layer height. It is designed to be printed with 5 different colors. The doe, sauce, spinach, cheese and fish fingers. To slice this file using prusa printers, go to the tab "Printer Settings" and set the extruders count to 5. Do NOT check "Single Extruder Multiple Material". But go to "Custom G-code", and add the Tool change G-code M600. To make the sliced file easier to read, you can set the preview color for the five extruders to the colors that you plan to use. Now switch back to the "Plater" tab and add the "Doe.stl". Add the other parts by right clicking the "Doe" object and selecting "Add part". Then add another instance of the earring if you want to wear this magnificent piece on both sides ;-)

If you want to use the presliced gcode, the colors have to be inserted in this order “doe, sauce, spinach, cheese and fish fingers”
