As requested the twist ball fidget available for everyone to download free

Features a choice of 2 sensory twist ball fidgets, the low poly version or the soft point version, simply choose your favourite and print

The sensory twist ball is designed to stimulate areas of the palm and help reduce stress and anxiety

Extremely easy to print, fully print in place with no brim needed

Features new internals making the twist fidget smoother then ever before

Being fully print in place, once printed just remove from the print bed and it's ready to fidget

Prints great in default slicer settings, I recommend 0 infill & no brim enabled

The low poly version needs supports painted under the lowest spikes (enabled by default in the supplied print profile)

I've tested in silk and regular PLA without any issues and even at 90% scale for anyone who wants a slightly smaller fidget
