Summary

This wall mount gives you the opportunity to hang your propagation tubes on the wall using double-sided tape.

I designed these wall mounts for a friend of mine who recently got into plants. They can be used to showcase and organize your propagating plants and also elevate the interior design of your place.

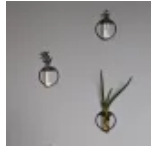

They can be glued to the wall using double-sided tape or another adhesive. I used glass test tubes with a straight base. (Link: <https://amzn.eu/d/02jNXpLr>)

I printed with PLA with 15% honeycomb infill. You can go with 3 walls to make sure the bottom piece holds the tube properly.

This is my first uploaded design, so I'm happy to hear your feedback and implement it!

Have fun printing!
