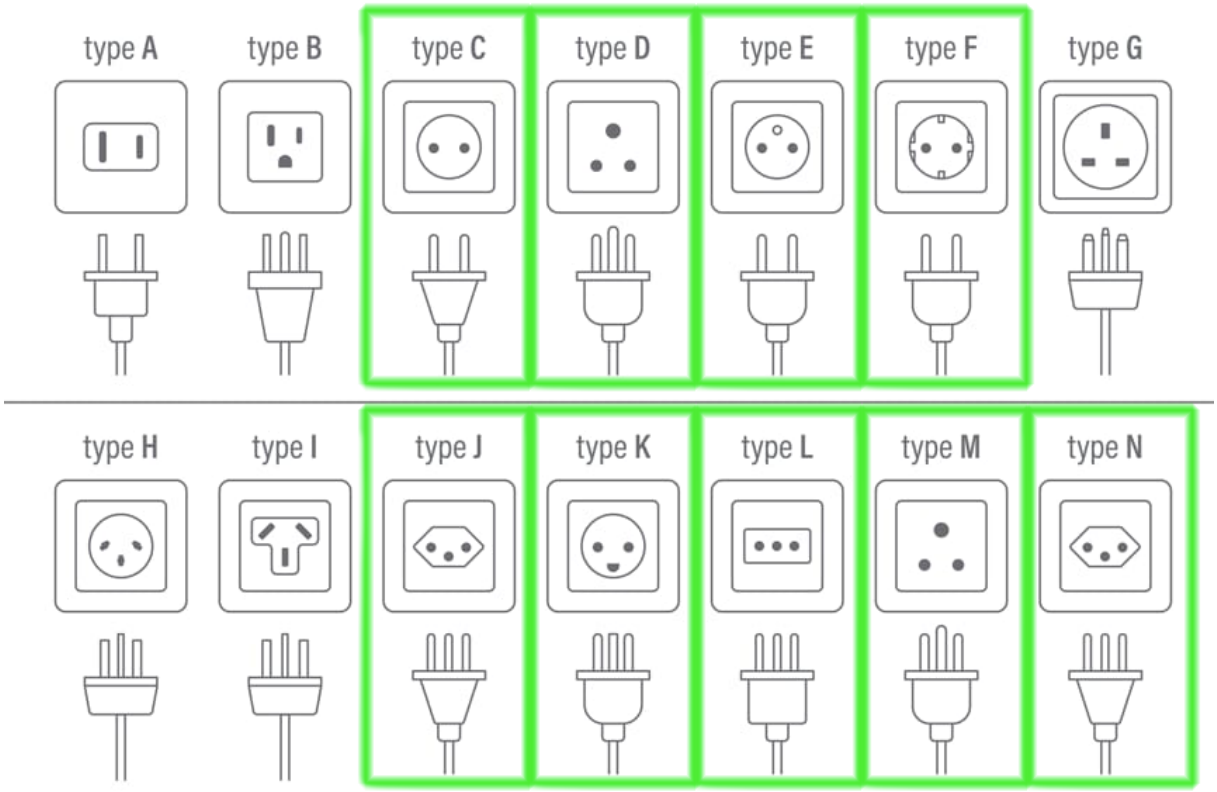
Tags: socket phonestand charger phone schuko

A stand for charging your phone while it's plugged into an outlet.

It can be placed on vertical or horizontal outlets.

The tray is also reversible. It has small notches on the sides to secure the charging cable if you want to leave the tray without the phone.

It is compatible with a lot of types of sockets as long as the plug does not have a ground connection:



If you notice any that don't fit well or if it's compatible with any others not on the list, please let me know.

I recommend using chargers like the one in the photo; other types of chargers may prevent it from sitting properly. If the plug has a child safety lock, the charger will sit more securely.

Following your suggestions, I have created a new version specifically for Schuko type sockets, which is much more stable. You can find it here:

If you print this, please **post a Make**! It helps me a lot to keep designing
