Tags: [auto](#) [ceske](#) [rc](#) [dalkove](#)

Print and build this scale model. You can build it as “shelf” model or add RC components and take it for spin. Model is in 1:32 scale and ready for any FDM/SLA printer.

Except of tires, whole model is printed from PLA. Tires are printed from Flex TPU for better grip.

Print is quite straightforward and it's important to have flow calibrated so axis are just tight enough to go thru bearings.

Non-printed parts are listed in .txt file and can be found on <https://3drcmodely.cz/modely-aut/favo-132--2>

A teď po našem:

Vytiskněte a postavte si tento dobový model. Buď jako model “na poličku”, nebo jej osadte RC prvky a užijte si s ním spoustu zábavy. Model je v měřítku 1/32 a připraven pro FDM tiskárny.

Krom pneumatik je celý model tisknut z PLA různých barev. Pneu jsou tisknuty z Flex materiálu pro lepší přilnavost.

Tiske je poměrně jednoduchý ale je důležité mít dobře seřízený flow tiskárny, aby osy byly tak akorát na těsno v ložiscích.

Seznam netištěného materiálu je v přiloženém .txt souboru.

Hodně štěstí se stavbou.
