Summary

By 3d printing 2 different models you could have a personalized shoe rack.

~ VERSION 1 ~

The idea of this design is that with 2 different 3d printed models and some ø16mm PVC tube you could make your own size shoe rack that fits your needs.

You will have to:

- 3D print 2 units of each model (2 units Part-A + 2 units Part-B) for 1 level, you can add as many levels as you want!
- Cut the ø16mm PVC tube at your desired length. You can check the cover photo to see my recommendations.

I also included two additional parts to use them as top parts for the shoe rack.

~ VERSION 2 ~

Many of you asked for the models without the through holes for the tubes. I upload the new designs in this version, but now you'll need 4 different models to complete 1 lever for the shoe rack. (Check image Version 2)
