Once assembled, the Cube is locked and can only be disassembled with a trick: Spin it really fast!

Size: 35mm - DO NOT scale - won't work well. Comment if you want another size :)

Print with:

- No supports
- Elephant foot compensation: 0.2mm
- 0,2mm layer height

Two versions:

- v1.0 - Tight version - can be hard to spin apart, but works well with Bambu Printer + Matte PLA
- **v1.1 - More Loose version - should be easier to spin apart**

Model files

puzzle-cube-v10-tight.3mf

☐ Tight version - proven to work with Bambu Printers and Bambu PLA Matte

puzzle-cube-v11-more-loose.3mf

☐ More space in between pieces, try if the other one is too tight
