I revisit the city of Ulvheim. This time we leave to craftsmen quarters and come to the powerfull nobles and rich merchants. Ulvheim B is a modular set of pieces that can be used to make relative intact as well as ruin buildings. You can print as many as you like and make something really gigantic.

I have tried to make a manual in with the images. Please comment if you have opinions on this.

The flat pieces use the shorter peg. Walls use the regular peg. For best stability, glue the tapered end of the peg into the hole from the bottom of each piece.

Mirror each piece for greater variation. I print these with 10% infill.

Video presentation

Access to all new models for \$2 per month

I have a subscription service on MyMiniFactory, a tribe. I make miniature wargaming and roleplaying game terrain for your home 3D printer.

All my new models for \$2 per month

- * Early access while I work for \$5 per month
- * Merchant license for \$20 per month
- * Airdropped loyalty rewards gradually giving you access to my previous models
- * 50% off in my store for all tribe subscribers
- * Be part of our community by suggesting ideas and vote on what could be the next project
