Introducing the Loftyo figure! The incredibly articulate, insanely expressive action figure for displaying, playing, and animating.

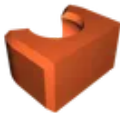

This figure is the result of five basic craft prototypes, hundreds of hours spent learning blender and 3-D printing, and countless 3-D printed prototypes.

I designed it to have a huge range of motion while having a simple look. But the real special thing about this figure is the interchangeable face piece design. You can mix and match face pieces to create an infinite amount of different expressions!

I hope you enjoy this figure as much as I enjoyed designing it!
