From the original designer of Drippy Bucket and Drippy Pail comes... Drippy Drum!

If you already have Drippy Bucket or Drippy Pail and wish they were less paint-y and more hazardous-waste-y, this is for you! Drippy Drum is the same basic dimensions as it's other family members and features the same slip fit tolerance and detent retention method. The lid and insert

components are optional for operation but essential for style points. Drippy Drum is the perfect companion to Drippy Bucket and Drippy Pail and is ready to help you organize your desk, hold a little plant, look good on a shelf and more. Please do not store hazardous waste in Drippy Drum.

Print it with or without the divider Insert, print it fast at .3mm layer height, no support necessary, no glue required, all snap fit connections and I recommend printing in PLA for dimensional stability. My sample model was printed with 3D Fuel Pro PLA. Please post pics of your finished model, give it a rating and tell everyone how you use your Drippy Drum!

I natively design in Imperial units so you may have to deal with it in your slicer accordingly.

If you Would like to send a tip:
