Carrion Harvester is a reclamation construct of the **Null Covenant**, one of the autonomous machine forms reshaped by the corrupted force known as **Echo** after the fall of the **Vorrakai Gates**. It moves through dead battlefields, collapsed relay zones, and machine graveyards, gathering wreckage, stripping useful components, and reclaiming broken systems for the spreading will of the Covenant. What remains after conflict does not stay abandoned for long when a Carrion Harvester is near.

Its low armored chassis, multi-legged stance, and heavy grasping forelimbs give the **Carrion Harvester** a clear battlefield role as a scavenger and recovery machine. This model is designed for **tabletop gaming, painting, collecting, and display**, with a strong mechanical silhouette and a dark sci-fi identity that fits perfectly within the visual language of the **Null Covenant**.

Perfect for:

- Sci-fi tabletop armies and rogue machine forces
- Salvage, recovery, and battlefield utility themed collections
- Painters looking for a compact robotic scavenger model
- Display shelves, RPG encounters, and machine swarm projects

Model features:

- **Null Covenant** support and salvage machine miniature
- Multi-legged walker design with heavy front manipulator claws
- Compact armored body with strong mechanical detailing
- Strong, readable silhouette suitable for tabletop use
- Designed as a **single-machine sci-fi miniature**
- Includes a detailed textured base

Available scales (model height without base):

- **32 mm scale**
- **54 mm scale**
- **75 mm scale**
- **90 mm scale**
- **120 mm scale**
- **1:10 scale**

What's included:

- STL files in **6 scales**
- Unsupported STL files
- Single-piece sculpt
- Format: **STL**

Printing recommendation:

- **Resin:** Recommended for the best surface detail, armor definition, and crisp mechanical features.
- **FDM:** Printable on FDM machines, preferably with a **0.4 mm nozzle** or smaller. Lower layer heights and slower outer walls will help preserve panel lines, claw details, and joint definition.

- **Supports: Organic supports are required**, especially beneath the main body, front claws, underside details, and inner spaces between the legs.
- **Orientation:** A slight backward or diagonal tilt is recommended to reduce visible support marks while helping preserve the front assembly, claw details, and upper armor surfaces.

Part of **Vorrakai Frontiers - Season I**.
