RIBBON PHONE STAND

I wanted to make a phone stand that looks interesting without making it complicated. That's how **Ribbon** came together — a simple shape that looks like one continuous strip folded into a stand.

It prints as **one piece**, with no assembly or extra hardware. Just a small, useful addition to your desk.

Simple Shape, Everyday Function

The curved back supports your phone, and a small front lip helps keep it in place. I kept the lip low so it doesn't get in the way of the screen.

- **70 mm wide** — with open sides for phones wider than the stand.
- **Low front lip** — simple and continuous, with no cable cutout.
- **One-piece design** — nothing to screw together or glue.

The way your phone sits will depend a little on its thickness and case. If you want to adjust the width or shape, I've included a **STEP file** too.

One Color, Plenty of Character

I kept the surfaces plain and let the curves do the work. There's no need for multi-color printing — a single filament color is enough.

Personally, I like this design in **matte colors**, but I'd love to see what you choose for yours.

Dimensions

Approximate dimensions when the stand is sitting upright:

- **Width:** 70 mm
- **Depth:** 98 mm
- **Height:** 71 mm
- **Ribbon thickness:** 4.8 mm

Printing Recommendations

Print the stand **on its side**, with the flat side profile against the build plate. The STL is already positioned this way.

Suggested starting settings:

- **Layer Height:** 0.20 mm
- **Walls:** 3 perimeters
- **Infill:** 15–20%
- **Supports:** None required in the supplied orientation
- **Orientation:** On its side
- **Material:** PLA or PETG

Print time and filament use will depend on your settings. Once it's printed, there's nothing to assemble.

Included Files

- **Ribbon_70.stl** — ready to slice, already positioned for printing.
- **Ribbon_70.step** — included for easy editing in **your favorite CAD software**.

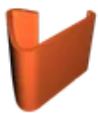

Feel free to change the width or adjust the design to fit your phone and setup.

Make It Yours

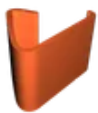

Choose a color you like, print one for your desk, or make one for a friend.

If you print RIBBON PHONE STAND, please share a Make! I'd love to see your prints and any changes you come up with.
