😸😸 WallArt – Cats 005

A beautiful feline-inspired WallArt design for everyone who loves cats! ❤

Cats 005 combines adorable feline shapes with a clean and artistic style, creating a decorative piece full of personality and charm. Whether you are a lifelong cat lover or simply enjoy beautiful animal-inspired artwork, this design adds a warm and playful touch to your walls.

Perfect for living rooms, bedrooms, hallways, offices, pet areas, cozy corners, or as part of a larger cat-themed WallArt collection. It can also make a lovely 3D printed gift for friends and family who love cats. 😸❤

The design looks fantastic in classic black, but you can also experiment with white, gray, metallic, silk, wood-style, pastel or any filament color that complements your interior and personal style.

Printing

My preferred settings for this WallArt are:

• Layer height: 0.28 mm

• Walls: 2

• Infill: 15%

• Supports: No

I prefer a 0.28 mm layer height for my WallArt models because the visible front surface is the most important part of the finished piece. This provides a great balance between appearance and printing time.

Scaling

You can scale the model to any size you prefer depending on your printer and available wall space.

For detailed WallArt designs like this, the larger you print it, the better it usually looks! Increasing the size makes the shapes and finer details more visible and gives the finished artwork a stronger and more impressive presence on the wall. 😸

Feel free to adjust the layer height, walls, infill and other print settings depending on your printer, material, chosen scale and personal preferences.

Mounting

I recommend using small pieces of double-sided adhesive tape to securely attach the WallArt to the wall. This makes installation quick and easy without drilling or screws.

If you print it, I would love to see your make! ❤

Happy printing! 😸
