The Snapmaker Hex Scraper XL Edition is here!

It comes with a perfect handle size and replaceable blades, making it ideal for scraping off prime lines, small and larger parts. Push all those parts off with less effort. I hope you find it truly satisfying! Print the 2 Color logo version for a nice “faceplant” two-sided logo. Add your own flair with Hex inserts, with and without Magnets!

BLADE PRINTING HINTS:

- **Is Blade is loose?** That can happen depending on the brand of filament you are using.
- **Blade Sizing:** You may need to **scale the BLADE X/Y 101% or higher** when using some filaments for tighter fit.
- Blades are best printed at 0.12 layer height for a sharper edge.
- Blades printed in PETG, ABS/ASA are recommended for strength

- Blades should be very tight when first installing, your print will generally shrink.

Why a 3D Printed Scraper?

- It's much more **gentle** on your build plates.
- Great for pushing off lots of parts without touching build plate.
