For optimal results, print the model using a 0.4 mm nozzle. Almost all parts can be printed "in-place" (as a single piece) without support structures—only the lid needs to be attached afterwards. All blades are fully interchangeable.

I printed this model with a super cheap eSun filament, which still delivers really clean results.

Support: If you want to support me and my work on new models, you can buy the filament through the link in my profile – that way you help me start new projects without it costing you anything extra!

Have fun printing and playing!

Commercial License & Memberships: Want to sell physical prints of this design? You can get a commercial license and exclusive access to my models through my membership tiers on Patreon, Printables or Thangs!
