he **Tornado Tower Fidget** is a mesmerizing 3D-printed toy made from two flexible, star-shaped sections. Twist, stretch, compress, and rotate the stars to create a flowing tornado form with satisfying movement and constantly changing geometric patterns.

The files include **two versions of the star**:

- A threaded version with a screw-in centre.
- A snap-fit version with a push-in pin.

A separate **connector is also included to join two completed stars together**, creating the larger double-ended Tornado Tower shown in the photo. Print two stars, connect them at their centres, and enjoy an

extended twisting fidget that transforms from compact layered stars into a tall swirling tower.
