Schmetterling is officially released!

Schmetterling is a compact and modular flywheel blaster platform designed with modularity, ergonomics, cosmetics, and repair-ability in mind.

Schmetterling 1.0 is designed from the ground-up as a small form-factor, mag-forward flywheel pistol that encourages experimentation. Print and assemble the grip and outer shell, then install any one of several flywheel cages and firing control groups to find what's right for you.

A massive thank you to all the beta testers, with a special thanks to Dumpster for printing like a million of these during beta testing :p, and to Hex for inspiration on this design.

Feature Highlights:

- 3 interchangeable packs with firing modes:
 - Semi-auto mechanical pack
 - Solenoid pack
 - Full auto pack
- Rapid, intuitive disassembly for hot-swapping and maintenance
- Supports up to 25mm spacing flywheels
- FPS range: 80 - 150FPS (depends on setup)
- Overall dimensions: 223mm x 57mm x 178mm

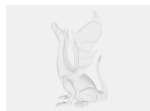

Keep me in the loop below with how your build turned out by uploading a Make below!
