This model is a **1:1 scale, non-firing replica of the M1 Garand**, designed for 3D printing as a display piece, historical prop, cosplay accessory, or educational model.

The goal of this project is to capture the iconic overall appearance and proportions of the M1 Garand while keeping the design completely **non-functional and incapable of firing ammunition**. It is intended only as a replica/display model and is not designed to accept functional firearm components.

The model is divided into printable sections to make a full-size replica possible on common 3D printers. Depending on your printer size, some assembly, sanding, filling, and finishing may be required. Printing the stock pieces in wood-toned filament and the metal portions in dark gray or black can give the finished model a convincing historical display appearance.

**Features:**

- Approximately 1:1 scale
- Full-size M1 Garand-inspired appearance

- Non-firing display replica
- Designed for 3D printing and assembly
- Suitable for historical displays, cosplay, reenactment props, classroom demonstrations, or wall decoration
- No functional firing mechanism
- Not intended to chamber or fire ammunition

Please follow all local laws and rules regarding realistic replica firearms, especially when transporting or displaying the finished model in public.
