Cat Door Corner Wall Art

A simple and playful decoration for every cat lover.

This design is made to sit on the **upper corner of a door frame**, creating the illusion of a curious cat climbing or peeking around the edge. 😊

The clean black silhouette works especially well against white or light-colored walls and gives the room a subtle but funny decorative detail.

Perfect for:

- Cat lovers
- Living rooms
- Bedrooms
- Kids rooms
- Hallways
- Offices
- Door frames
- Pet-themed rooms
- Gifts for cat owners

Features

- Cute climbing cat silhouette
- Designed for door-frame corners
- Clean and minimalist look
- Lightweight
- Easy FDM print
- No supports required
- Easy mounting
- Scalable directly in your slicer
- Looks great in matte black PLA
- Perfect small decoration for almost any room

The model works particularly well in **black PLA**, but you can of course print it in any color to match your interior.

Model Thickness: Approximately **3 mm**

Scaling

The model can easily be scaled depending on your door frame and available space.

For the best appearance, I recommend printing it **larger rather than smaller**, especially if you want the thinner parts such as the tail and paws to remain strong.

Keep the original proportions when scaling.

Recommended Print Settings

Printer: FDM / FFF

Material: PLA recommended

Nozzle: 0.4 mm

Layer Height: **0.28 mm**

Walls / Perimeters: **2**

Infill: 15%
Infill Pattern: Rectilinear
Model Thickness: Approximately **3 mm**
Supports: No
Brim: Usually not required
Raft: No
Print Orientation: Flat on the build plate
Cooling: 100% after the first layers
Wall Generator: Arachne or Classic

Recommended Speed

Outer Wall: Up to **250 mm/s** on capable printers
Inner Wall: 200–300 mm/s
Infill: 250–300 mm/s
Top Surface: 150–200 mm/s
First Layer: 30–50 mm/s

Tip: A textured PEI build plate can give the visible surface a very nice matte texture when printed face-down.

Mounting

The easiest mounting method is **double-sided mounting tape**.

Because the model is very lightweight, only small pieces of tape are usually needed.

Clean the door frame or wall surface before mounting for the best adhesion.
